NETWORKS
AN INTERNATIONAL JOURNAL

Subject Index to Volume 33, 1999

All-to-all communication, 179
Antisymmetrical digraphs, 1, 29, 43
Assortment problem, multidimensional, 239
Augmenting a matching, 1, 29, 43
Augmenting paths of minimum length, 43
Automated guided vehicle systems, 57

Balanced flow networks, 1, 29, 43
Bayesian networks, probabilistic, 193
Binary tree, complete, 221
Bit permutation networks, 261
Blossoms, 1
Bottleneck graph partition problem, 189

Capacitated matching problems, 1, 29, 43
Cardinality matching algorithms, 1
Channel capacities, 167
Channel graph
  path-search, 249
  strictly nonblocking operation, 269
Clos networks, three-stage, 269
Coherence control, 193
Conferencing server, configurable, 293
Continuous time financial model, 93
Corner-flipped topology, 125

Data transmission, 167
Decision tree, path-search algorithm modeled as, 249
Degree sum condition, 233
Dependent-symptoms model, 193
Digraphs, antisymmetrical, 1, 29, 43
Discrete time algorithm, 93
Disease-symptoms, 193
Disjoint set union structures, 29
Distributed computing systems, 109
Double depth-first search, 43
Dual ascent, 109
Dynamic algorithm, 167

Embedding, small congestion, 71
Embedding algorithm, 221
Extended generalized shuffle networks, 269

File allocation and join site selection problem, 109
Financial behavior, dynamic model, 93
Forward–backward invariance property, 269
Full Steiner trees, 125
Futures, 93

Gilbert network problem, 175
Goldman's dominance algorithm, generalization, 79
Graphs
  bottleneck graph partition problem, 189
  connected edge symmetric, 157
  embedding, 71, 221
  skew-symmetric, 1, 29, 43
  toughness, 233

Hypercubes, embedding of graphs into, 71

Independent-symptoms model, 193
Integer programming, 109
Interconnection network, 221

Knowledge base, 193

Layered auxiliary networks, 1
Longest path problem, probabilistic, 207

Matching heuristics, 29
Mathematica program, 193
Melzak's method, generalization, 175
Meshes
  high-dimensional, 293
  hypersquare, 179
Minimum-cost strong network orientation problems, 57
Minimum transmission time problem, 167
Multidimensional assortment problem, 239
Multigraph models, coherent assessment of probabilities, 193
Multistage interconnection network, 261
  strictly nonblocking, 269

Network flows, 1, 29, 43
Network location problem, multicriteria, 79
Nuclei, 1

Optical networks, all-to-all communication, 179

Parallel graph, path-search, 249
Parallel processing, 221
Pareto optimal locations, 79
Path, quickest, 167
Path-search, average-case complexity, 249
Permutation graphs, 161
  diameter, 161
Permutation routing, 261
Phase-ordered algorithms, 43
Polynomial time algorithm, rectilinear Steiner trees, 145
Probabilistic longest path problem, 207
Probability assessment, 193
Propagation delays, 167
Pseudocode formalism, 29
Pseudo-Gilbert–Steiner trees, 175

Quickest path problem, 167

Server design, conferencing, 293
Shuffle networks, extended generalized, 269
Single-hop networks, 179
Skew-symmetric graphs, 1, 29, 43
Sparse network, 167
Spider-web graph, path-search, 249
Square of a graph, 233
Star graph, 221
Steiner trees, rectilinear, 125
  polynomial time algorithm, 145
Sterling number, 261
Strictly nonblocking conference networks, 293
Strictly nonblocking operation, 269
Super edge connectivity properties, 157
Switching network, 261
Telecommunications network, file allocation and join site selection problem, 109
Tenacity, 1
Torus
  hypersquare, 179
  r-dimensional, 293
Toughness, subgraphs, 233
Transmission time, 167
t-tough graph, 233

Uncapacitated facility location problem, 239
U (2) networks, 269
Uniform network, 269

Vacancy probability, 249
Vertices, probing idle-or-busy status, 249

Wavelength division multiplexing, 179
